PROFESSIONAL SUMMARY

Frontend Developer with 4 years of experience building responsive, high-performance web applications, browser extensions, and AI-integrated systems using React.js, JavaScript (ES6+), DOM Manipulation, HTML5, CSS3, and modern UI frameworks (Tailwind, SCSS, Bootstrap). Proven expertise in developing AI-powered tools, document-based RAG chatbots using local LLMs, and real-time user engagement extensions. Skilled in writing unit and integration tests with Jest and Cypress, collaborating in Agile/Scrum environments, and optimizing application performance.

CORE DEVELOPMENT EXPERTISE

- Developed reusable and performant UI components using React.js (functional components), Redux, SCSS, and Bootstrap.
- Converted 15+ complex Figma wireframes into pixel-perfect, interactive UIs with responsive design across devices.
- Led cross-browser UI compatibility across Chrome, Firefox, and Edge, optimizing for rendering speed and interaction.
- Implemented advanced form validation, dynamic dropdowns, and controlled components using React Hooks.
- Integrated RESTful APIs using Axios with robust error handling, loaders, and fallback UIs.
- Created modular design systems with reusable components such as cards, modals, tables, and input fields.
- Participated in sprint planning, agile ceremonies, code reviews, and iterative product releases.
- Wrote unit and integration tests using Jest and Cypress to validate UI flows and ensure quality.
- Optimized React components using memoization and lazy loading, improving performance across devices.

WORK EXPERIENCE

Software Developer – Taskus *October 2025 – Present*

- Developed advanced Chrome extensions and complex dashboard platforms focused on AI productivity, translation, user wellness, and time tracking.
- **TaskGPT (AI Chrome Extension):** Built an AI-powered extension integrating multiple AI models to provide real-time text transformation (summarization, writing improvement, academic research aids), automated email template generation (e.g., sick leave), grammar correction popups, and context-aware inline predictive text.
- **Translate Buddy (Translation Extension):** Engineered a multi-language translation extension enabling seamless real-time text conversion across web pages.
- **Shield (User Wellness & Productivity Extension):** Developed a wellness extension featuring blur options, wellness breaks, sound studios, and engagement games to reduce stress, alongside automated water, breathing, and eye-strain reminder workflows.
- **Productivity Tracker (Ticket-Based Operations Dashboard):** Created an organizational campaign management dashboard for ticket-based workflows, enabling precise tracking of active tasks, elapsed work hours, break/resume cycles, and consolidated analytics.

Software Developer – HCL Tech, Chennai *August 2022 – October 2025*

- **Medical Research Paper Search Engine:** Built advanced search filters (by author, journal, year, disease category) using React and Node.js query params. Implemented pagination and server-side search logic in Node.js using MongoDB regex and indexes to improve query speed. Developed the backend API to fetch, filter, and serve search data, and integrated local storage search history to reduce manual paper search time by over 50%.
- **IDEIA Tool (Web Application):** Designed and developed the frontend architecture using React.js (Functional Components) and Redux for state management. Translated 15+ complex screens from Figma designs into interactive UI components with 100% pixel accuracy using Bootstrap 5.

Personal Projects

- **Custom RAG Document Chatbot:** Developed a full-stack, local document-based AI chatbot leveraging RAG (Retrieval-Augmented Generation) and vector embeddings without relying on third-party global cloud APIs. Configured backend integration using Node.js, Express, and local large language models via Ollama/Llama 3 to securely answer user queries exclusively from custom shared documents.

TECHNICAL SKILLS

- **Languages & Core:** JavaScript (ES6+), DOM Manipulation, HTML5, CSS3
- **Frontend:** React.js, Redux, jQuery, Bootstrap, SCSS, Tailwind, Chrome Extensions APIs
- **State Management:** Redux, Context API
- **API & AI Integration:** REST APIs, Axios, Local LLMs (Ollama, Llama 3), RAG Architectures, Vector Embeddings
- **Performance Optimization:** Lazy loading, memoization, modular design
- **Build Tools & Version Control:** Webpack, NPM, Yarn, Git, GitHub
- **Testing & Tools:** Jest, Cypress, Figma, Responsive Design, Agile, Scrum, Jira

CERTIFICATIONS & EDUCATION

- **Certifications:** JavaScript Certification (Udemy), Full Stack Development (MERN Stack – GUVI), Claude 101 & Claude Code Base Training
- **Education:** B.E. Electronics and Communication Engineering – Kongu Engineering College, Erode (GPA: 7.77, 2019 – 2022)
